Detailed Breakdown of Common Interview Questions

C Programming Fundamentals

Q1. What are the different data types available in C? Explain their uses.
Explanation: Candidates should be familiar with basic data types like `int`, `float`, `double`, `char`, and their variations like `unsigned int`, `long`, etc. Understanding the size and range of each type is crucial, especially for low-level programming or system design.

Q2. How does the `sizeof` operator work? Provide examples.
Explanation: Interviewers assess understanding of memory layout and data alignment. Candidates should explain that `sizeof` returns the size in bytes of a data type or variable and demonstrate with code snippets.

Q3. Explain the concept of variable scope and lifetime in C.
Explanation: This question probes knowledge of local vs. global variables, static variables, and their lifespan during program execution.

Pointers and Memory Management

Q4. What are pointers? How are they used in C?
Explanation: Pointers are variables that store memory addresses. Candidates should explain their importance in dynamic memory management, array handling, and function parameter passing.

Q5. Differentiate between `NULL`, uninitialized pointers, and dangling pointers.
Explanation: Understanding pointer safety is critical. Candidates should describe best practices for initializing pointers and avoiding memory leaks.

Q6. Explain dynamic memory allocation with `malloc()`, `calloc()`, `realloc()`, and `free()`.
Explanation: Candidates should demonstrate knowledge of manual memory management, including allocating, resizing, and freeing memory to prevent leaks.

Data Structures and Algorithms

Q7. How are arrays different from linked lists? When would you prefer one over the other?
Explanation: This question assesses understanding of data structure characteristics, such as contiguous memory vs. dynamic linking, and their impact on performance.

Q8. Describe the implementation of a stack using arrays and linked lists.
Explanation: Candidates should explain push and pop operations, along with time complexity and use cases.

Q9. What is recursion? Provide an example of a recursive

algorithm.Explanation:Understanding recursion involves grasping base cases and recursive calls. Example: factorial calculation or Fibonacci sequence.Q10. Explain sorting algorithms such as Bubble Sort, Selection Sort, and Merge Sort.Explanation:Candidates should discuss time and space complexities, stability, and practical applicability.

File Handling and IO Operations

Q11. How does file handling work in C?Explanation:Candidates should demonstrate reading from and writing to files using `fopen()`, `fprintf()`, `fscanf()`, `fclose()`, etc.Q12. What are the modes of opening a file?Explanation:Modes like `read ('r')`, `write ('w')`, `append ('a')`, and their implications should be explained.

System Programming Concepts

Q13. Explain the concept of pointers to pointers.Explanation:This is an advanced topic where a pointer points to another pointer, useful in multi-level data structures or dynamic memory handling.Q14. What is the significance of the `volatile` keyword?Explanation:Candidates should understand that `volatile` prevents the compiler from optimizing out variable reads/writes, crucial in embedded systems.

Object-Oriented Programming (C++ Context)

Q15. How is encapsulation achieved in C++?Explanation:Discuss access specifiers (`private`, `public`, `protected`) and data hiding principles.Q16. What are constructors and destructors?Explanation:Explain automatic initialization and cleanup of objects.
