Sample Paper for Fourth Semester with Answers: Overview

Below are sample papers for common subjects in the fourth semester, complete with answers and explanations. These are designed to mirror the actual exam format, providing a realistic practice experience.

Sample Paper 1: Bachelor of Science (B.Sc.) - Physics

Part A: Multiple Choice Questions (1 mark each)

Which of the following is the unit of electric resistance?
 a) Ohm
 b) Watt
 c) Coulomb
 d) Tesla

The phenomenon of bending of light when it passes from one medium to another is called:
 a) Reflection
 b) Refraction
 c) Dispersion
 d) Diffraction

Which law states that the total current entering a junction equals the total current leaving?
 a) Coulomb's Law
 b) Kirchhoff's Current Law
 c) Newton's Law
 d) Ohm's Law

Answers to Part A
 a) Ohm
 b) Refraction
 c) Kirchhoff's Current Law
 d) Ohm's Law

Part B: Short Answer Questions (2-4 marks)

Derive the expression for the potential energy stored in a capacitor. State and explain Newton's second law of motion with an example.

Answers to Part B

Potential Energy Stored in a Capacitor: The energy (U) stored in a capacitor is given by:

$$U = \frac{1}{2} C V^2$$
 where: (C) is the capacitance, (V) is the potential difference across the capacitor.

Derivation: When a small charge (dq) is moved onto a capacitor, work (dW) is done:

$$dW = V dq$$
 Since ($q = C V$), we can write:

$$dW = V dq = \frac{q}{C} dq$$
 Integrating from 0 to (Q):

$$U = \int_0^Q \frac{q}{C} dq = \frac{1}{2} \frac{Q^2}{C}$$
 But ($V = \frac{Q}{C}$), so:

$$U = \frac{1}{2} C V^2$$
 This energy is stored in the electric field of the capacitor.

Newton's Second Law of Motion: Newton's second law states that the force acting on an object is equal to the mass of the object multiplied by its acceleration:

$$F = m a$$
Explanation: If a force (F) is applied to an object of mass (m), it accelerates at a rate (a). For example, pushing a shopping cart with a force of 10 N causes it to accelerate depending on its mass.

Sample Paper 2: Bachelor of Commerce (B.Com.) - Financial Accounting

Part A: Multiple Choice Questions

Which of the following is a non-current asset?
 a) Inventory
 b) Cash
 c) Machinery
 d) Accounts Receivable

The purpose of preparing a trial balance is to:
 a) Find the net profit
 b) Detect errors in ledger posting
 c) Prepare financial statements
 d) Calculate gross profit

Which accounting principle states that expenses should be recognized in the period they are incurred?
 a) Consistency Principle
 b) Matching Principle
 c) Going Concern Principle
 d) Materiality Principle

Answers to Part A
 c) Machinery
 b) Matching Principle
 b) Matching Principle

Part B: Short Answer Questions

Explain the concept of accrued expenses with an example. What is depreciation? Describe two methods of calculating depreciation.

Answers to Part B

Accrued Expenses: Accrued expenses are expenses that have been incurred but not yet paid. They are recognized in the accounting period in which they occur to adhere to the matching principle. Example: Salaries payable for the month of March, paid in April, are accrued expenses for March. Even though the payment is made later, the expense is recorded in March's books.

Depreciation: Depreciation is the systematic allocation of the cost of a tangible asset over its useful life. It reflects the reduction in the value of assets over time due to wear and tear.

Methods of Calculating Depreciation:

Straight Line Method: Same amount is depreciated each year. Formula:

$$\text{Annual Depreciation} = \frac{\text{Cost of Asset} - \text{Salvage Value}}{\text{Useful Life}}$$

Diminishing Balance Method: Higher depreciation in earlier years,

decreasing over time. It applies a fixed rate to the reducing book value each year.
